Robin,

I peer reviewed Eric's analytical runs -- WO1202001 -- samples -01, -03, -05, -07, -08, -10, -13, -17, -20, -22, -23, -24, -26, -28, -30, & -32.

Sample 1202001-23 had a hit of 5.8 for bis-2-ethylhexylphthalate but this result is qualified "B" due to method blank contamination.

The rest of the results for bis-2-ethylhexylphthalate, & bis(2-chloroethyl) ether are < 5 ug/L.

Stevie Wilding
